

ROSHANI KAMBLE

Blockchain Developer Intern — Web3 Developer — Smart Contract Developer

Pune, Maharashtra — +91 9307312497 — roshanikamble2002@gmail.com

LinkedIn — GitHub

PROFESSIONAL SUMMARY

M.Sc. Blockchain Technology candidate with hands-on experience building Ethereum-based decentralized applications, Solidity smart contracts, Web3 integrations, and blockchain verification workflows. Experienced with Solidity, Ethereum, EVM, Smart Contracts, Foundry, Hardhat, Ethers.js, React, TypeScript, Python, FastAPI, REST APIs, and PostgreSQL. Built four blockchain projects spanning smart-contract security, DeFi, decentralized escrow, and credential/document verification, with a focused interest in secure smart-contract development, Web3 applications, and on-chain/off-chain architecture.

EDUCATION

MIT World Peace University (MIT-WPU)

M.Sc. Blockchain Technology

Pune, Maharashtra

Jul 2025 – Present

Savitribai Phule Pune University

BBA (Computer Applications)

Pune, Maharashtra

Jul 2022 – Jul 2025

EXPERIENCE

Web3 & Blockchain Development Trainee

MIT World Peace University

Aug 2025 – Present

Pune, Maharashtra

- Applied **Ethereum, EVM, Solidity, Smart Contracts, DeFi, decentralized identity, cryptographic hashing, and blockchain verification** across academic and practical blockchain development work.
- Developed **blockchain verification workflows** using document hashing and smart-contract-based verification concepts to strengthen tamper-evident authenticity and on-chain verification.
- Integrated Web3 application workflows with **React, TypeScript, Python, FastAPI, REST APIs, and PostgreSQL** to connect blockchain functionality with on-chain/off-chain application architecture.

SELECTED BLOCKCHAIN PROJECTS

ChainSentinel – Smart Contract Security & Vulnerability Analysis Platform

Solidity — Foundry — Hardhat — Slither — Python — React

- Built a Solidity security-analysis platform focused on **4 vulnerability categories**—reentrancy, access-control flaws, unsafe external calls, and validation weaknesses—to demonstrate practical smart-contract vulnerability analysis.
- Developed vulnerable and remediated Solidity contracts with **exploit-focused tests** to reproduce security weaknesses and validate secure-contract remediation using Foundry and Hardhat.
- Integrated Solidity security analysis with **Python and React** to create a developer-facing workflow for examining smart-contract vulnerabilities.

ChainEscrow – Decentralized Milestone Escrow & Dispute Resolution dApp

Solidity — Ethereum — Hardhat — Ethers.js — React — TypeScript

- Built a decentralized escrow dApp supporting **milestone-based payments, approvals, refunds, and dispute workflows** through Solidity smart contracts.
- Developed a **wallet-connected React interface** using Ethers.js and TypeScript to enable blockchain-based contract interaction and user workflows.
- Implemented **contract events, access control, secure withdrawals, and Ethereum Sepolia testnet integration** to support transparent and controlled escrow execution.

LendGuard – DeFi Lending & Collateral Risk Protocol

Solidity — Ethereum — ERC-20 — Foundry — React — Ethers.js

- Built an educational Ethereum testnet lending protocol covering **ERC-20 assets, collateralized borrowing, interest logic, health assessment, and liquidation**.
- Designed Solidity protocol logic around **oracle risk, price manipulation, liquidation edge cases, access control, and emergency controls** to demonstrate security-aware DeFi engineering.
- Integrated **React and Ethers.js** with Ethereum smart contracts to demonstrate end-to-end DeFi application interac-

tion.

VerifiChain – Blockchain Credential & Document Verification

Solidity — Ethereum — SHA-256 — React — Ethers.js

- Built a blockchain credential and document-verification platform using **SHA-256 hashing and Solidity** to provide verifiable authenticity proofs without storing original documents on-chain.
- Designed issuer and verifier workflows covering **credential issuance, authorization, verification, revocation, and blockchain events**.
- Integrated **wallet connectivity and Ethereum Sepolia** to demonstrate decentralized credential verification through an end-to-end Web3 application.

ACHIEVEMENT

- **Winner – E.D.G.E. Mini Project, MIT-WPU:** Developed a blockchain-based identity management solution focused on secure digital identity sharing.

TECHNICAL SKILLS

Blockchain: Blockchain, Ethereum, Ethereum Sepolia, EVM, Distributed Ledger Technology, On-chain/Off-chain Architecture, Blockchain Verification

Smart Contracts: Solidity, Smart Contracts, ERC Standards, ERC-20, Contract Deployment, Contract Interaction, Events, Modifiers, Access Control, Gas Concepts

Web3 & DeFi: Web3, dApps, Ethers.js, Wallet Integration, DeFi, Decentralized Identity, Cryptographic Hashing

Smart Contract Security: Smart Contract Security, Reentrancy, Access Control, Oracle Risks, Front-running, Integer Overflow/Underflow, Denial of Service, Vulnerability Analysis

Development: React.js, TypeScript, JavaScript, Python, FastAPI, Node.js, REST APIs, PostgreSQL, MySQL, MongoDB

Tools: Foundry, Hardhat, Slither, Git, GitHub, GitLab, Docker, VS Code
